AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A ball trajectory measuring apparatus comprising:

a first camera for photographing a flying ball from a back of a flying ball ~~from a back part~~;

a second camera having an angle of view related to that of the first camera and serving to photograph the back of the flying ball ~~from the back part~~ later than the first camera;

a third camera for photographing ~~the~~ a front of the flying ball ~~from a front part~~;

a control portion for controlling photographing timings of the first, second and third cameras; and

a calculating portion for calculating position coordinates of the ball based on image data obtained by the first, second and third cameras, and position coordinates, directions of optical axes and angles of view of the respective cameras,

wherein the angle of view of the first camera partially overlaps with that of the second camera, and the angle of view of the second camera is related to that of the first camera based on ball images which are simultaneously photographed by the first camera and the second camera.

2. (Currently Amended) The ball trajectory measuring apparatus according to claim 1, wherein the first camera is positioned behind a ball launch point, the second

camera is positioned between the launch point and a drop point, and the third camera is positioned ~~before~~ after the drop point.

3. (Canceled)

4. (Currently Amended) A ball trajectory measuring apparatus comprising:

a first camera for photographing a front of a flying ball ~~from a front part~~;

a second camera having an angle of view related to that of the first camera and serving to photograph the front of the flying ball ~~from the front part~~ earlier than the first camera;

a third camera for photographing ~~the~~ a back of the flying ball ~~from a back part~~;

a control portion for controlling photographing timings of the first, second and third cameras; and

a calculating portion for calculating position coordinates of the ball based on image data obtained by the first, second and third cameras, and position coordinates, directions of optical axes and angles of view of the respective cameras,

wherein the angle of view of the first camera partially overlaps with that of the second camera, and the angle of view of the second camera is related to that of the first camera based on ball images which are simultaneously photographed by the first camera and the second camera.

5. (Currently Amended) The ball trajectory measuring apparatus according to claim 4, wherein the first camera is positioned ~~before~~ after a ball drop point, the second camera is positioned between a launch point and the drop point, and the third camera is positioned behind the launch point.

6. (Canceled)

7. (New) The ball trajectory measuring apparatus according to claim 1, wherein the first camera and the second camera are located at substantially the same position behind the launch point, said first and second cameras are inclined upward from a horizontal direction, and an angle of inclination of said first camera is greater than an angle of inclination of said second camera.

8. (New) The ball trajectory measuring apparatus according to claim 5, said first and second cameras are inclined upward from a horizontal direction, and an angle of inclination of said first camera is less than an angle of inclination of said second camera.

9. (New) The ball trajectory measuring apparatus according to claim 1, wherein the flying ball is photographed by only said first and said third camera during a first portion of the flight of the flying ball, said first, second and third cameras during a second portion of the

flight of the flying ball, and only said second and third cameras during a third portion of the flight of the flying ball.

10. (New) The ball trajectory measuring apparatus according to claim 4, wherein the flying ball is photographed by only said third and said second camera during a first portion of the flight of the flying ball, said first, second and third cameras during a second portion of the flight of the flying ball, and only said first and third cameras during a third portion of the flight of the flying ball.
